

Improve your view with Anti-Fog window film from Madico

New Anti-Fog film from Madico is designed for applications requiring continuous glass clarity and fog reduction. Common commercial applications include refrigeration and freezer display doors and deli cases. Anti-Fog film can also be used in hotel and residential applications such as on bathroom mirrors, windows, in saunas, shower and steam rooms, and indoor pool and spa enclosures.

In typical situations, fogging of a transparent surface occurs when water vapor (most often from the relative humidity of the air) condense as tiny water droplets onto a cooler transparent glass surface. Collectively, these water droplets scatter visual light and dramatically reduce the transparency of an otherwise optically clear surface.

Madico Window Film's coating technology utilizes a permanent hydrophilic coating layer that reduces the surface tension of the surface. This forces the isolated water droplets to collect and spread into a uniform ultra thin layer which is visually more transparent.

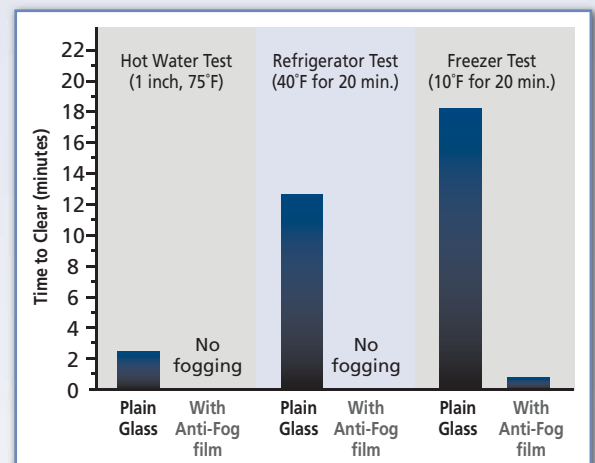

Laboratory comparisons between standard clear glass and glass with Madico Window Film's Anti-Fog film installed, revealed no initial fogging in standard hot water and refrigerator tests and significantly reduced times for clearing of the fog layer in all three of the standard fogging tests.

All Madico films are installed by professional dealers and carry a comprehensive manufacturer's warranty.

Commercial & Residential Applications

- Refrigerator, Freezer & Deli Cases
- Bathroom Mirrors
- Hotels and Office Buildings
- Steam Rooms & Saunas
- Indoor Pool & Spa Enclosures

Madico Anti-Fog Window Film Performance

Wherever there is glass... We can improve it.
